

# Solution Brief

## DRaaS V2

For AWS Elastic Disaster Recovery (AWS DRS)

### Key Benefits

**Multitenant DRaaS on AWS** public cloud for MSPs and customers

DRaaS **management** console for MSPs to manage its customers

Modern cloud base DRaaS for MSPs with almost **zero investment** up front

**Automate** one of the most complex aspects of organizational resiliency

**Be certain** of the ability to recover in the event of a disaster

With **minimal effort**, maintain organizational DR readiness, proactively identify unknowns, and address issues

EnsureDR DRaaS V2 is a new innovative solution for MSPs or any service provider looking to offer the new generation of “disaster recovery as a service” based upon public cloud to their customers. EnsureDR DRaaS is the first public cloud DRaaS offering for MSPs. Built on top of AWS cloud infrastructure and AWS Elastic Disaster Recovery Service. Capabilities include: innovative MSP multitenant management view, customer self-tenant visibility and easy to build DR scenarios with automated testing and live recovery, as well as amazing recoverability reporting and dashboard. The customer will enjoy the benefits of DRaaS in the public cloud with the dedicated service of an MSP. The MSP will have almost zero investment up front, and all customers will be under the MSP’s AWS tenant, enabling the MSP to charge the customer directly for his service.

EnsureDR provides end-to-end DR automation to recover and test the availability and configuration of servers, networking, applications, databases, infrastructure assets and resources, web portals, domain controllers and more.

### Automate Disaster Recovery

With EnsureDR, organizations can test and recover granularly, typically application level, and/or the entire environment. Testing can be performed at scheduled times and performed without administrator intervention with zero impact to the replication process or production environment(s).

### Visibility & Insight

The EnsureDR interface includes a real-time dashboard as well as historical reporting. Each offer a deep level of visibility and insight into the organizational DR posture. Among the metrics provided are the actual recovery time down to the minute, detailed proof of the ability to recovery, and a full audit trail of the step-by-step recovery process. EnsureDR reports are exportable and commonly shared with internal and external auditors.
